Power Windows, locks and Mirrors

ALUMINUM SERVICE BODIES

Strong yet lightweight, our aluminum service bodies offer the Reading performance you expect while cutting your fuel costs, reducing wear and tear on your truck and increasing available payload. Reading's aluminum truck bodies are up to 50 percent lighter than comparable steel bodies and 10 percent lighter than composite fiberglass. In addition, because of aluminum's natural corrosion resistance, our aluminum service bodies offer exceptional durability carrying an industry-leading 10 year warranty.

Reading aluminum service bodies are made exclusively from recycled aluminum. Because recycled materials take 95 percent less energy to produce than new materials, your aluminum service truck body will save energy long before it ever hits the road. In fact, it will save even more energy when it reaches the end of the road, since it can be recycled and put back into service again.

You'll appreciate what aluminum does for your bottom line and your customers will appreciate what your company is doing for the environment.

& ALUMINUM CLASSIC II >

the Classic 11 is Reading's premier service body. With quality components. Innovative features and Reading's legendary durability.
